

Documentation Bandaged Cube Explorer

Alex Soriano

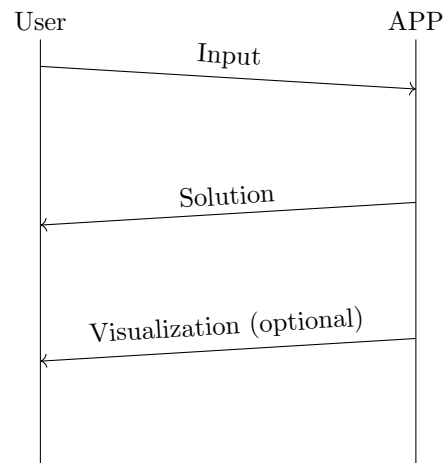

December 2025

1 Use case

(current)

To be changed with a graphical interface, similar to cubexplorer.

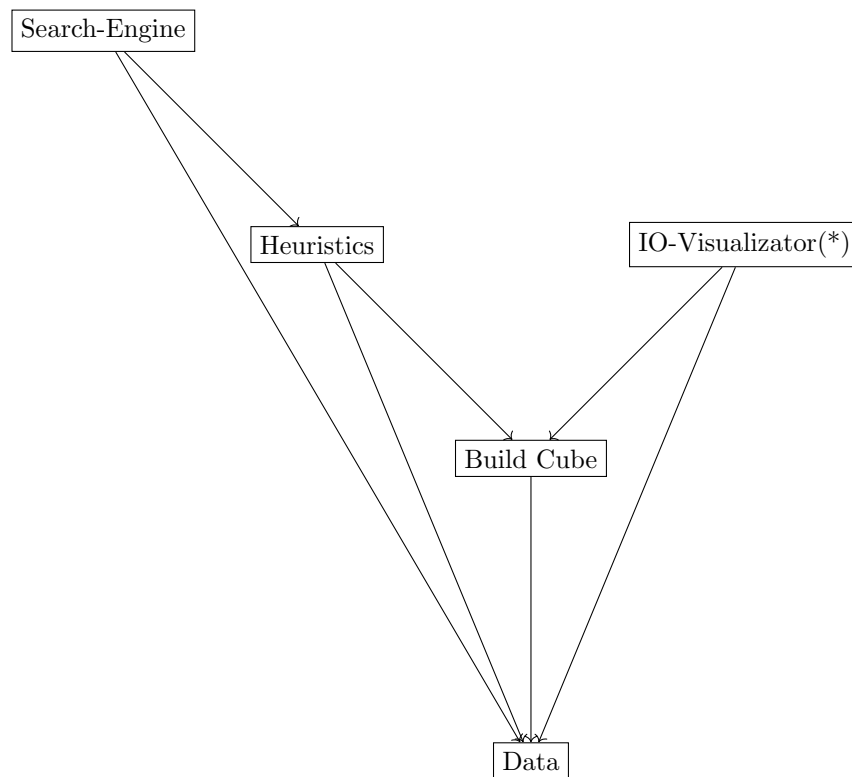

2 Packages and dependencies

- Data
- IO-Visualizator (to be deleted)
- BuildCubes
- Seach-Engine
- Heuristics

IO-Visualizator will be redone or partially deleted. Graphical interface will be done in python. The part of calling to a main haskell program must be designed and implemented.

2.1 Dependencies between packages

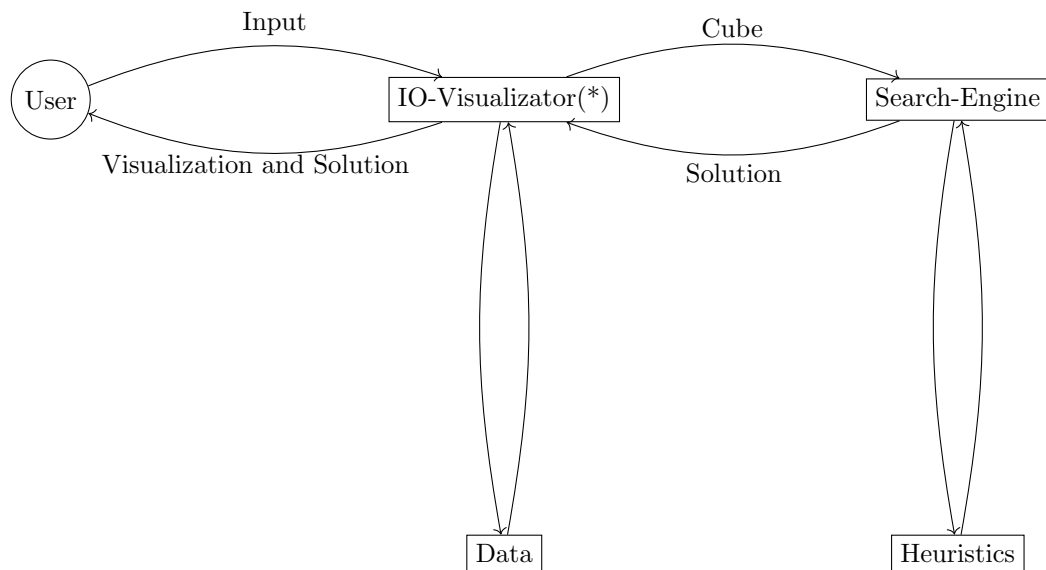

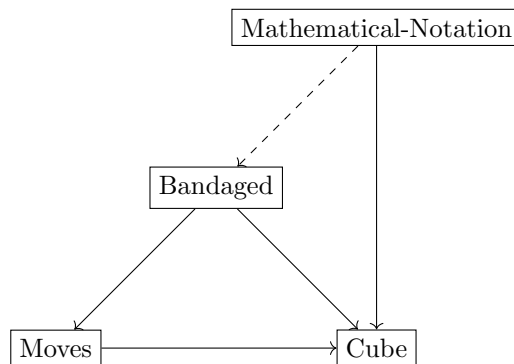

Figure 1: Old design

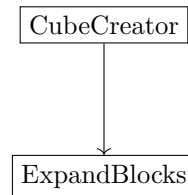

Maybe, in this graph it will only be splitted in 2 halves (python and haskell).

3 Modules

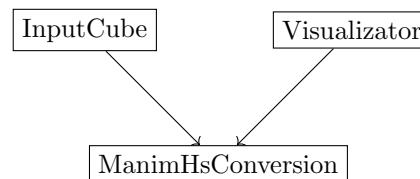

3.1 Package Data

3.2 Package BuildCubes

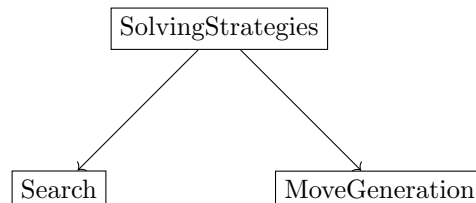

3.3 Package IO-Visualizator

This package will be redone in python (except from ManimHSCConversion, which might be moved).

3.4 Package Search

3.5 Package Heuristics

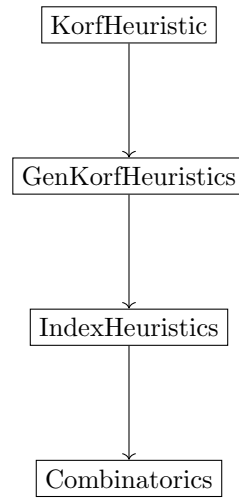

Figure 2: Old design

The old design generates pdb5 in each program execution. To be changed into loading and saving pdbs in files:
